

Finding Credible Vaccine Information

Before considering vaccine information on the Internet, check that the information comes from a credible source and is updated on a regular basis.

CDC's vaccines and immunization web content are researched, written and approved by subject matter experts, including physicians, researchers, epidemiologists, and analysts. Content is based on peer-reviewed science. CDC leadership makes the final decision on the words, images, and links to best serve the information needs of the public as well as healthcare providers, public health professionals, partners, educators, and researchers. Science and public health data are frequently updated. Most pages are reviewed yearly.

CDC's NCIRD is a member of the World Health Organization's (WHO) [Vaccine Safety Net](#) and follows web content and credibility criteria defined by the [Global Advisory Committee on Vaccine Safety](#) (GACVS).

CDC's Immunization Safety Office communicates timely and transparent information on [CDC's vaccines safety site](#).

As you search for vaccine information, consider guidance from these sources:

- The Immunization Action Coalition suggests [questions you should ask](#).
- [The National Network for Immunization Information \(NNii\)](#) suggests questions to ask when evaluating information.
- The University of California San Francisco's [Evaluating Health Information](#) page lists "Red Flags" every consumer needs to know.
- The [Medical Library Association](#) translates medical jargon ([Medspeak](#)) into language everyone can understand.

While the Internet is a useful tool for researching health-related issues, it should not replace a discussion with a healthcare professional.
