

StaySafeMN Graphic: COVID-19 Booster Shots

Everyone 5 and older should get booster shot when they are due.

Age 5 to 11 years -> Get a booster shot at at least 5 months after the second dose of your primary series.

Graphics- Second dose with 5 months arrow to booster shot.

Age 12 years and older -> Get an updated (bivalent) booster shot at least 2 months after your primary series or last booster.

Graphics- Primary Series or Last Booster with 2 months arrow to Updated Booster shot.

! Warning: People with certain immunocompromising conditions should talk to their health care provider about how many vaccine doses they need and when.

People age 5-17 years can only get Pfizer for their booster.

People age 18 and older can get either Pfizer or Moderna for their booster.
